Take your career to the next level by adding four simple letters: CITP.

The demand is already high. And growing!

Why add the Certified Information Technology Professional (CITP) credential to your CPA?

Why get the CITP credential?

It tells your clients you:

- Are competent and qualified in the subject matter and are committed to continued management and technology resources
- Have access to a community of like-minded professionals and the latest tools, resources, standards, training, experience, testing and education
- Have demonstrated your specialized skills, expertise and experience in IT assurance; and emerging trends
- Are competent and confident in the subject matter
- Are distinguished from other information technology professionals through your expertise and experience in IT assurance, and IT governance and strategy
- Are competent and qualified in the subject matter and are committed to continued management and technology resources
- Have had your expertise backed by the trusted and regulated profession

Why get the CITP credential?

The pathway to the credential

Step 1: Learn.

The AICPA offers both self-study and classroom-based learning opportunities.

Step 2: Pass the exam.

Your CITP exam consists of multiple-choice questions. You must answer 200 questions to get your CITP credential. You can take your CITP exam within the five-year period preceding the date of your CITP application. Candidates can sit for the CITP Exam before earning the 75 hours.

Step 3: Gain experience.

A CITP candidate must meet the following business experience requirement within the five-year period preceding the date of the CITP credential application:

- A minimum of 1,000 hours of business experience in the CITP Body of Knowledge

Step 4: Get credentialed.

To get your CITP, you must:

- Have at least four years of business experience in the CITP Body of Knowledge, including, but not limited to the following:
  - Information security governance
  - Data governance
  - Data analysis and reporting
  - Data assurance and monitoring
  - Information technology management
  - IT governance and strategy
  - IT audit process and controls
  - System enforcement and controls
  - Information technology controls
